

ROHIT AGARWAL

Austin, TX | +1 (617) 952-1113 | agarwal.ro@northeastern.edu | [LinkedIn](#) | [Github](#)

Professional Summary

Senior AI Solutions Architect who has built AI-ready data foundations and governance frameworks within large enterprises. Skilled at data readiness assessments, scalable ETL/ELT pipelines, and configuring compliance controls to deliver AI-ready datasets. Achieved a 90% reduction in batch processing time through Snowflake and Python automation while improving data reliability by 30%. Seeking to drive data initiatives that align with AI priorities as an Advisory AI Data Specialist.

Technical Skills

- **AI / LLM & Evaluation:** Anthropic Claude API, Agentic AI, LLM Orchestration, RAG Pipelines, Multi-agent Systems, Prompt Engineering, Braintrust, LLM-as-Judge Methodology, Audit Trails
- **Data Engineering & Platforms:** Snowflake, dbt, Python, n8n, pgvector (Vector Search), Airflow, Apache Iceberg, TypeScript, JavaScript, REST APIs, BigQuery, Redshift, Databricks, MCP/SDK, Data Integrations, ETL, ELT, Data Transformation, Data Pipeline Scaling, Production Data Pipelines, Medallion Architecture, PySpark
- **Cloud:** AWS, Azure, Google Cloud
- **BI / Governance:** Tableau, Power BI, Looker, Atlan (MCP/SDK/APIs), Metadata Management, Data Lineage, Data Quality, Data Governance, Compliance Controls, Sensitive Data Handling
- **Data Architecture & Modeling:** AI/ML Data Patterns, Vectorization

Professional Experience

Atlan | Sr. AI Solutions Architect

Dec 2024 - Present

Key impact: 5 enterprise customers onboarded · catalog migrations from months to days · drove production adoption of AI-generated metadata

- Architected an internal RAG knowledge system that indexes the team's solutions, playbooks, and docs, enabling CSMs to self-serve answers and cutting SA requests by 30%.
- Built an LLM evaluation pipeline (Claude Code, Braintrust) benchmarking AI-generated vs human metadata across ~500 columns; showed AI matched or beat human quality in less-curated layers (0.88 vs 0.66), leading 3 enterprise customers to adopt AI-generated enrichment.
- Architected a source-agnostic, agentic migration framework that replaced one-off per-customer scripts, cutting catalog migrations from months to days for 5+ enterprise customers and enabling self-serve onboarding.
- Led a data readiness assessment across 47,000 Tableau calculated fields; surfaced governance gaps and redirected the customer from premature AI build-out, preventing a failed rollout.
- Architected a governance solution for an enterprise customer's Apache Iceberg/Nessie data on Google Cloud, evaluating multiple integration paths and reusing a proven connector instead of a custom build to reach compliance faster and with far less long-term maintenance.

Dell Technologies | Lead Data Engineer · Built the AI-Ready Data Foundation

Aug 2022 - Dec 2024

Key impact: Built the Snowflake data platform that became the AI-ready foundation. 50% infrastructure cost reduction, 90% faster ETL

- Built and improved data pipelines on a unified Snowflake data lake with standardized integrations for four engineering teams, cutting infrastructure costs by 50% and engineering effort by 30%, and creating an AI-ready foundation.
- Re-engineered Python ETL automation cutting batch processing from ~1 hour to ~10 minutes (90% reduction) and enabling higher-frequency refresh cycles for ML pipelines and reporting.
- Built a Python validation and reconciliation framework with automated error reporting; improved pipeline reliability by 30% and reduced data errors by 35%, directly reducing noise in downstream AI feature engineering.

Virtustream (A Dell Technologies Business) | Senior Data / Analytics Engineer

Apr 2018 - Aug 2022

- Automated ingestion pipeline in Python consolidating 16 data domains; cut ETL licensing costs by 25% and accelerated delivery by 15%.
- Built real-time data center capacity dashboard integrating financial and cloud data across operations; reduced quarterly finance budgets by 25% through better provisioning visibility.

Dell EMC | Sr. Analyst Data Intelligence Engineer

May 2016 - Mar 2018

- Redesigned the data warehouse and automated executive reporting in Tableau using BigQuery, Python, and Azure, which improved query performance by 50% and increased real-time decision-making effectiveness by 20%

Education

Northeastern University | *Master of Science, Information Systems*

Boston, MA Sep 2015 - Jul 2017

Uttar Pradesh Technical University *Bachelor of Engineering, Information Technology* India Jun 2008 - May 2012
